

## Carters Process to Export a file to Builda Price Software

Carters have provided us a documentation on exporting a compatible file from their database. Please send these instructions to your Carters representative to send you the price file as below:

- 1. For the priced Excel spread sheet from EMS we go into Print, choose Materials Listing and tick **'Include Prices' & 'Include Prenail Build Stages'.**
- 2. Click OK.
- 3. Click on the **export button (icon below with the down arrow)** and **choose Excel.**

 Save Excel file and then delete all materials shown in the manufacturing build stages (Prenails and trusses) so <u>only total shown</u> (the same as if we print a customer copy).

5. However, in the case of **Precut Balance of Roof**, including line items ensures the builder gets all their manhours for this section. Zero the rates for these line items.
